§220.54 When the Board will not purchase a consultative examination.

A consultative examination will not be purchased in the following situations (these situations are not all-inclusive):

- (a) In disabled widow(er) benefit claims, when the alleged month of disability is after the end of the 7-year period specified in §216.38 and there is no possibility of establishing an earlier onset, or when the 7-year period expired in the past and all the medical evidence in the claimant's file establishes that he or she was not disabled on or before the expiration date.
- (b) When any issues about the actual performance of substantial gainful activity have not been resolved.
- (c) In childhood disability claims, when it is determined that the claimant's alleged childhood disability did not begin before the month of attainment of age 22. In this situation, the claimant could not be entitled to benefits as a disabled child unless found disabled before age 22.
- (d) When, on the basis of the claimant's allegations and all available medical reports in his or her case file, it is apparent that he or she does not have an impairment which will have more than a minimal effect on his or her capacity to work.
- (e) Childhood disability claims filed concurrently with the employee's claim and entitlement cannot be established for the employee.
- (f) Survivors childhood disability claims where entitlement is precluded based on non-disability factors.

§ 220.55 Purchase of consultative examinations at the reconsideration level.

- (a) When a claimant requests a review of the Board's initial determination at the reconsideration level of review, consultative medical examinations will be obtained when needed, but not routinely. A consultative examination will not, if possible, be performed by the same physician or psychologist used in the initial claim.
- (b) Where the evidence tends to substantiate an affirmation of the initial denial but the claimant states that the treating physician or psychologist considers him or her to be disabled, the

Board will assist the claimant in securing medical reports or records from the treating physician.

§220.56 Securing medical evidence at the hearings officer hearing level.

- (a) Where there is a conflict in the medical evidence at the hearing level of review before a hearings officer, the hearings officer will try to resolve it by comparing the persuasiveness and value of the conflicting evidence. The hearings officer's reasoning will be explained in the decision rationale. Where such resolution is not possible, the hearings officer will secure additional medical evidence (e.g., clinical findings, laboratory test, diagnosis, prognosis, etc.) to resolve the conflict. Even in the absence of a conflict, the hearings officer will also secure additional medical evidence when the file does not contain findings, laboratory tests, a diagnosis, or a prognosis necessary for a decision.
- (b) Before requesting a consultative examination, the hearings officer will ascertain whether the information is available as a result of a recent examination by any of the claimant's medical sources. If it is, the hearings officer will request the evidence from that medical practitioner. If contact with the medical source is not productive for any reason, or if there is no recent examination by a medical source, the hearings officer will obtain a consultative examination.

§ 220.57 Types of purchased examinations and selection of sources.

- (a) Additional evidence needed for disability determination. The types of examinations and tests the Board will purchase depends upon the additional evidence needed for the disability determination. The Board will purchase only the specific evidence needed. For example, if special tests (such as X-rays, blood studies, or EKG) will furnish the additional evidence needed for the disability determination, a more comprehensive medical examination will not be authorized.
- (b) The physician or psychologist selected to do the examination or test must be qualified. The physician's or psychologist's qualifications must indicate that the physician or psychologist
